FAMILY MEMBERS. THESE ARTIFACTS

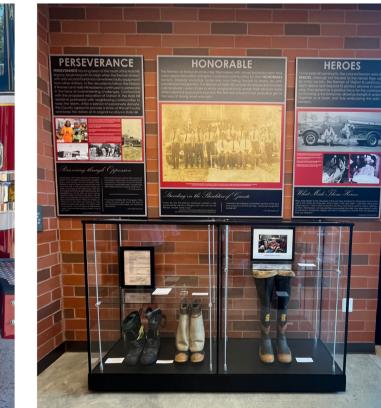

INCLUDE FIREFIGHTING BOOTS FROM THREE

PROGRESSES THROUGH THE HISTORY AS YOU WALK TO THE FRONT DOOR OF THE NEW STATION.

THE LOBBY IS OPEN 24/7 AND ALLOWS DIFFERENT LEARNING STYLES TO PARTICIPATE. THE MONITOR SHOWS A LOOP OF VIDEOS AND ORAL HISTORIES WHILETHEPANELSPROVIDEDWRITTENDESCRIPTIONS, QUOTES FROM THE COMMUNITY AND HISTORIC DESCRIPTIONS. ALSO INCLUDED ARE HISTORIC ARTIFACTS SUCH AS A FULL UNIFORM, BOOTS AND

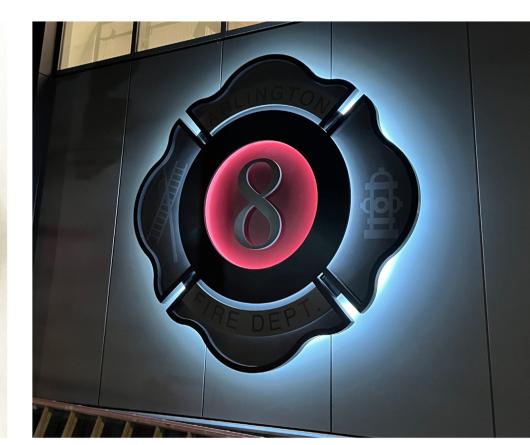

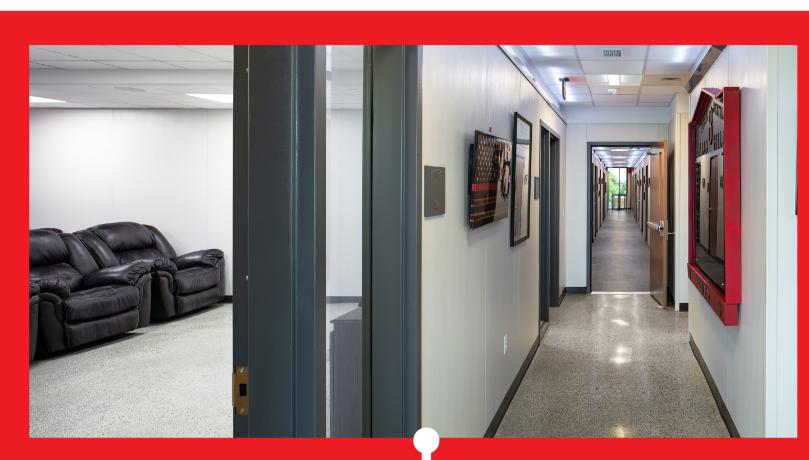

ALONG THE ACCESSIBLE PATH TO THE FRONT DOOR, THE STATION NUMBER IS PROMINENTLY DISPLAYED IN A CUSTOM SIGN DESIGNED AROUND THE HISTORIC STATION 8 UNIFORM BADGE.

included an enclosed day room with no exterior windows to provide a retreat without risk of glare from outside. This room is acoustically separate from the kitchen/dining space and doubles as a training space when needed.

(Right) Station 8 includes a dining room table adjacent to a small terrace space that houses the gas grill. This space is highly functional and sized to allow multiple people to cook, a dedicated serving space as well as a nook housing the coffee machine and trash/recycling.

(Left) The third floor provides individual bunk suites allowing optimal gender neutrality of living accommodations. Eleven of the bunk suites are adaptable into fully accessible units in the event a future need arises, and the twelfth is built as fully accessible. Each suite includes a single person bunk room, a locker alcove and an en suite bathroom. The layout allows for a firefighter to sleep past shift change as needed without being interrupted by the arriving personnel for the next shift utilizing their locker or taking a shower.

(Right) While the footprint was significantly restricted by the site size and proportions, a company office was able to be located on the first floor adjacent to the public lobby with visual access to the apparatus bays. This space is utilized by station personnel for report writing, studying, and incident follow up as needed.

(Left) The apparatus bays include 4 drive through bays as well as a direct capture exhaust system, four fold doors and a state of the art station alerting system.

(Right) The fitness room was designed on the second floor to provide acoustic separation from the sleeping quarters and includes an innovative outdoor patio to expand the workout space allowing a ful shift to train simultaneously with a variety of equipment.
